Identify, secure, monitor & control your enterprise digital assets and data loss prevention

IT Risk Assessment

Unique risk assessment framework encompassing all risk elements with risk quantification

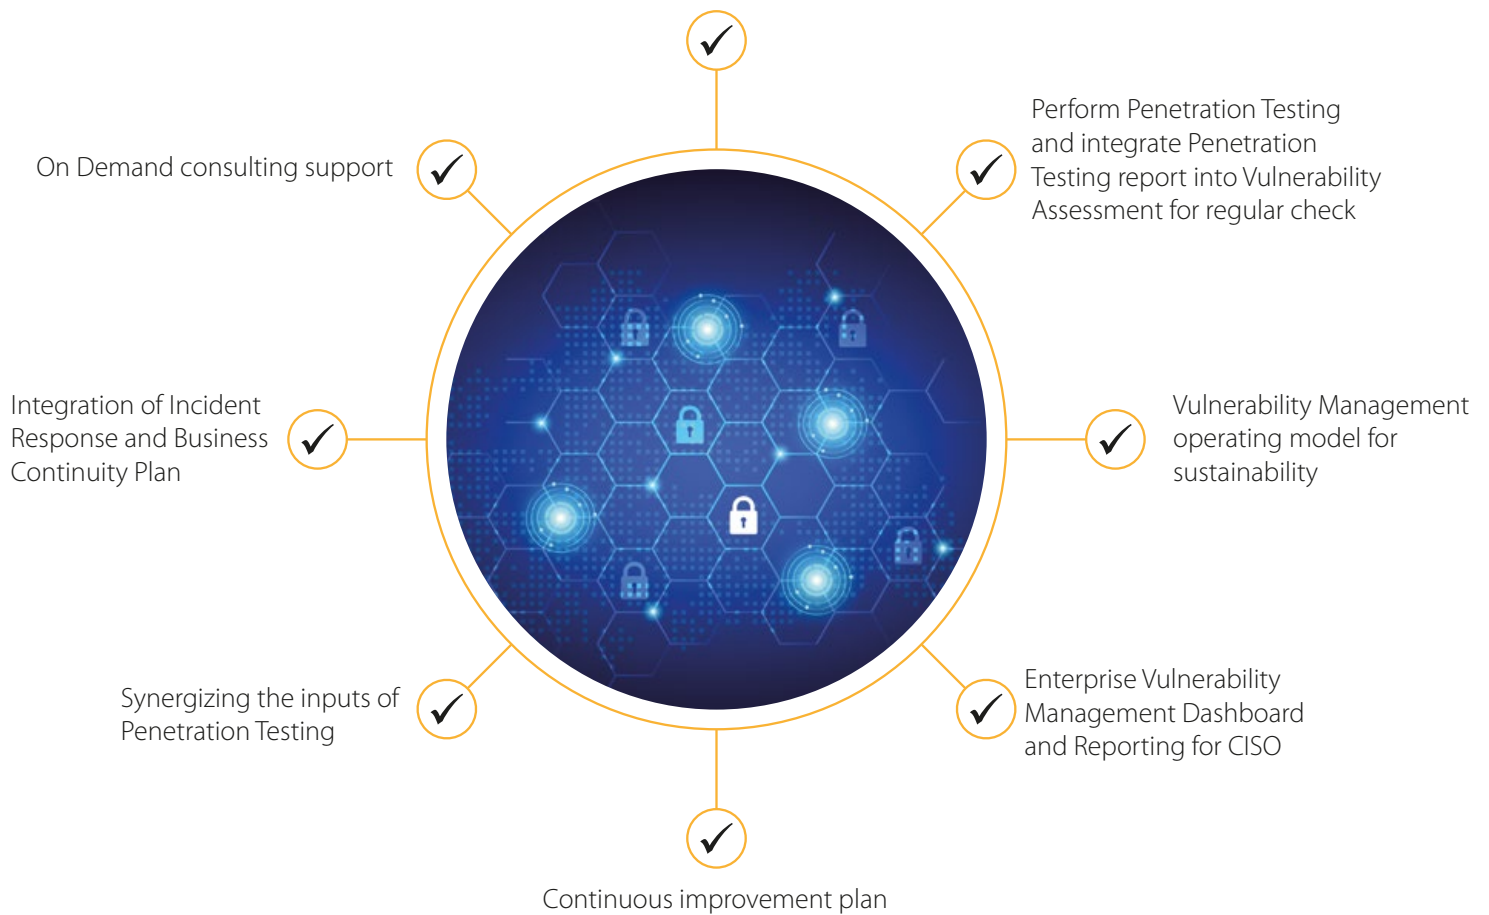

Threat Management

Unified Threat Management across Applications, Data, network and end-points and Cyber Deception.

VULNERABILITY MANAGEMENT AS A SERVICE

Vulnerability Assessment on Network, Distributed, Endpoint, Database and Web Properties

APPLICATION SECURITY

Application Security Assurance Program

Synergy offers a comprehensive software security assessment program for web, mobile and thick client applications to identify potential vulnerabilities at the code level and implement an effective risk mitigation process at the application design and architecture stage. Synergy recommends a hybrid approach comprising of Dynamic, Static and Manual testing to ensure high level of software security assurance.

Vendor Application Security Assurance Program

Companies today extensively use third party applications for automating their business processes and most often extend the applications to customers, employees, partners and supplier ecosystem, expanding the attack surface of the organization. Synergy's vendor application security assurance program is designed to secure your software supply chain and provide assurance for all your third-party applications by a rigorous software security test process.

Secure SDLC Consulting Services

Absence of secure coding techniques and not incorporating security at the design and development stage results in exploitable applications and expensive security testing later. Synergy provides consultation services to establish secure software development life cycle program aimed at reducing re-mediation cost by incorporating security at the design and development stages.

As the security leader for an organization, a CISO must navigate an ever changing security landscape.

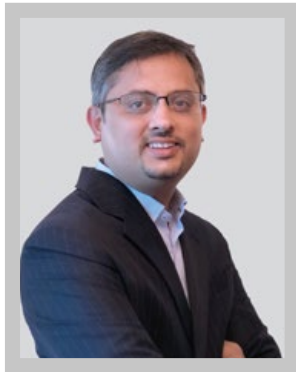

Charting a successful course means aligning operational excellence and security priorities, and meeting business objectives.

Synergy's "CISO - As A Service" helps the organization define an effective security strategy, which aligns business strategy and technical needs, and includes in-depth knowledge of the threats and risks that impacts the organization.
